

Antibiotics are an essential part of modern medicine. They form the basis for the treatment of life-threatening bacterial and fungal infectious diseases. The Transfer Group Anti-infectives identifies new, promising active substances and systematically advances their development into innovative drugs.

The Transfer Group Anti-Infectives is an integral part of the [InfectControl 2020](#) research network funded by the German Federal Ministry of Education and Research (BMBF). We receive further essential grants from the Free State of Thuringia and the German Centre for Infection Research (DZIF).
