

Integrative inference of gene-regulatory networks in *Escherichia coli* using information theoretic concepts and sequence analysis.

Kaleta C, Göhler A, Schuster S, Jahreis K, Guthke R, Nikolajewa S (2010) Integrative inference of gene-regulatory networks in *Escherichia coli* using information theoretic concepts and sequence analysis. *BMC Syst Biol* 4, 116.

[Details](#)

Abstract

Although *Escherichia coli* is one of the best studied model organisms, a comprehensive understanding of its gene regulation is not yet achieved. There exist many approaches to reconstruct regulatory interaction networks from gene expression experiments. Mutual information based approaches are most useful for large-scale network inference.
