Constantly changing institute

Science is a dynamic process – new knowledge is gained permanently, novel technological possibilities arise and new research areas develop. The changes in the structural organisation of the HKI reflect these dynamics. During the course of their scientific qualification, research group leaders accept new positions in Germany and abroad and continue their successful research. In turn, young scientists join the HKI to develop their independent scientific profile and establish new research groups.

On the following pages, you can find an overview of the former structural units of the HKI and the current affiliations of the group leaders.

Microbial Biochemistry and Physiology (until 2015)

Secondary Metabolism of Predatory Bacteria (until 2016)

Cell and Molecular Biology (until 2017)
