Construction HKI Biotech Center

Following the recommendation of the evaluation group in 2014, the Leibniz HKI started planning a new building which will replace the laboratory buildings 1 and 2. In August 2018, the Leibniz HKI finally received the permission to initiate the construction of the modern and larger HKI Biotech Center. In the future, scientists will find the best conditions for their application-oriented research projects there. With the completion planned for 2021, research groups with a biotechnological and immunological focus will move in.
