

Leibniz Research Alliances

Leibniz institutions form collaborative research alliances which use inter- and transdisciplinary approaches to address current scientific and socially relevant issues.

The alliances are designed for a period of five to 15 years. They are open for collaboration with universities, other non-university research institutions and infrastructure facilities as well as research groups abroad.

The HKI is according to its scientific profile currently a partner in the following Leibniz Research Alliances:

- [Biodiversity](#)
- [Infections'21: Transmission Control of Infections in the 21st Century](#)
- [Health Technology: Prevention, Diagnosis, Therapy](#)
- [Bioactive Compounds and Biotechnology](#)
