

# Microbial interactions as source of new antiinfective compounds

The research group Miqwi is integrated into the structural unit Evolution of Microbial Interactions. The group deals with the application-oriented projects to identify, isolate and characterise novel natural products from the secondary metabolism of amoebae-microbe-interactions.

The research group Miqwi is funded by the Free State of Thuringia with means of the European Social Fund.

Funding of the research group ended on December 31, 2018.
